FLAT ROOF ASSEMBLY GUIDE

TOP LOG PARTS ARE SMALL AND CUT IN FACTORY

For installation find these parts in package measure length of part and follow dimension line above wall detail drawing. **Important** to also see log height, can be different for each wall.

Other wall logs will have labels. Labels will be in log connection cuts

For parts with no log connection label will be on side

NOTE:

Wall dimension are only as an example. See exact project wall drawing

ROOF JOIST ASSEMBLY

1. Assembly details according to wall layout.
2. Top short details will not have stickers on them. Follow dimension line measurements and put details in position
3. Use screws 5x100 for fixing top log details. For log with thickness 28mm it is recommended to drill holes before using screws. Drill with Ø4mm. Recommended, to avoid wood parts splitting. Minimum spacing from ends is 50mm.
4. See roof joist part drawing for roof joist placement. See roof part schedule for roof joist detail views, or any other drawing if it is made, to check roof joist placement.
5. Use screws 6x200 to fix roof joist to position. All roof joist top sides will be cut to make roof slope.

ROOF BOARD PLACEMENT AND FIXING

1. Fit side roof joist parts, length depends of flat roof overhangs.
2. Distribute evenly between log walls. Use screws 5x120. Screw side roof joist from inside of log cabin with 2 screws.
3. See roof part drawing for RB - roof board placement and roof part schedule for RB cross section drawing. If roof boards are splitted see roof part drawings for instalation places.
4. Start instalation from roof joist beginning. Use screws 3.5x45 for roof board fixation.

ROOF BOARD PLACEMENT AND FIXING

1. After all roof board instalation measure out let size and cut hole in roof boards.
2. Instal RS - roof side board, check roof part schedule for cross section of part. Roof side boards are instaled on roof boards, use screws 3.5x45. Should be screwed from bottom of roof boards.
3. Instal WB - wind boards, check roof part schedule for cross section of part. Wind boards are provided longer and straight cuts. On site roof board ends should be cutted to 45° angle, or straight cut.
4. If wind boards are shorter then roof length connections should be made on roof joists. Connection should not be on one roof joist, but at least 1 roof joist between connections.

ROOF JOIST CONNECTION

1. See roof joist placement plan. Roof joists are marked RJ and length is shown in roof part drawing.
2. Place roof joists in positions. These cuts will be made in factory. Depending on roof joist dimensions cuts could change.
3. Use 4 screws 3,5x45 to fix connected roof joists together.
4. Use roof joist screws 6x200, to connect roof joist to walls.
